THE CLINIC WITH A DIFFERENCE...

The Sunflower Clinic offers a new approach to Healing & Wellbeing, incorporating several modalities needed to achieve an optimal result.

Hi, My name is Hardo Bottin and I invite you to read this information which explains why my clinical approach is somewhat unique.

For the last 25 years I have been working as a Therapist and during most of this time my primary focus has been **The Completion Seminar** (which I founded in 1986). Fifteen years ago I embarked upon studying the additional modality of **Classical Homoeopathy**, two years ago I entered into the world of **Live and Dried Blood Microscopy** and in February, 2010 our new Clinic opened introducing **Colon Hydrotherapy** to the Adelaide Hills.

**The Sunroom
Social Area**
A place to relax

We need to remember that our bowels are the cradle where good health or disease is created...

Healthy Bowels,
Healthy Blood,
Healthy Body,
Healthy Brain.

It is quite remarkable how many people suffer from bowel congestion. I see this in the Dried Blood Microscopy again and again. It is not just about changing your diet or taking some laxatives. The material I am talking about has been stuck along the walls of the Colon (Large Intestine) for many years continuously introducing the same toxins again and again into the bloodstream. Sooner or later this poisoning will result in severe health problems. Considering Colon cancer is one of the most common forms of cancer in the developed world it seems only logical to do whatever is needed to prevent this from occurring.

I now have the opportunity to support individuals in their desire to recover from past traumas be it on the Mental, Emotional, Physical or Spiritual plane, by utilising these different modalities. **My dream is that we create a society where health becomes more important than disease**, where healthy people investigate before the symptoms of illness force them to act. Nutritional Microscopy is part of what I call **'The Science of Preventology'**. Looking at your Live and Dried Blood reveals any weaknesses or problems before they are detected by conventional blood tests, which gives us the chance to change our Diet and Lifestyle accordingly.

**At the beautiful
freshly renovated
Sunflower Clinic
near Hahndorf.**

**Your comfort
and privacy is
assured.**

There are no specific diseases, only specific disease conditions, and after all it is our responsibility to ensure that we prevent illness wherever we can. In reality and to be perfectly honest for the past 20 odd years I have basically been waiting for people to get sick or develop symptoms so that I could make a living - NO MORE! This is why it is so important to have regular Live and Dry Blood tests so that illness can be prevented.

If there are already signs and symptoms indicating that there is an imbalance within the different aspects of our being then **Classical Homoeopathy** is a safe, effective and gentle mode of treatment. The subtle action of homoeopathic medicines is something that many people do not understand very well and yet it is the second most used medical model in the world.

The Completion Seminar is presented over two weekends and designed to support individuals to experientially move beyond the limitations of their habitual life & create an inner freedom that surpasses anything ever considered possible. Completing the past is a pre-requisite to being present in the here and now. This moment in time is the *only* reality that exists and as such it is important not to let unresolved issues from the past or wishful thinking regarding the future interfere with the sacredness of this moment. Emotional healing needs to take place before we can even consider happy, successful relationships with others and for those who are still preparing for parenthood please get rid of any excess baggage before you pass it on to your children.

I am also continuing my studies in Metaphysics which I started in the late 80's and look forward to achieving my desired goal of the elusive PhD within the next two years. **Counselling** is a vital part of my clinical work, which is designed to bring together the different aspects of who we are into a balanced and harmonious interplay.

The word 'healing' is sometimes misunderstood as it is often misused or inappropriately chosen. Simply put it means TO MAKE WHOLE WHAT IS BROKEN. This includes the mind, the emotion, the body and the spirit. This mending can only occur on all these levels when we are able to operate from our heart. You may say that this sounds corny or rather cliché. I agree and at the same time it is my experience that without letting my heart guide me the effectiveness of my work would be significantly diminished. I am not prepared to let this occur!
